

Project Proposal: SafeBuyRealties Real Estate Marketplace Platform

Prepared for: SafeBuy Realties

Date: March 22, 2026

Introduction

Corne Labs is pleased to present this proposal for **SafeBuyRealties** – a secure and user-friendly real estate marketplace designed to prevent fraud and streamline property transactions.

Building on prior discussions and leveraging the client's prototype frontend concept, we will deliver a scalable web platform where **buyers, sellers, property professionals, and internal staff** each have tailored access and tools.

The SafeBuyRealties platform focuses on **security, transparency, and verification** throughout the property transaction process. The system introduces structured verification workflows and escrow-based payment mechanisms to ensure that buyers are protected and sellers operate within a trusted marketplace.

In the Nigerian real estate market, inadequate verification processes have often resulted in buyers losing significant sums due to fraudulent property listings. SafeBuyRealties addresses this problem by ensuring that:

- Property listings undergo verification before becoming available for purchase
- Legal documentation and inspection checks are conducted before payments are finalized
- Escrow mechanisms protect both buyers and sellers during transactions

Through this platform, SafeBuyRealties aims to build a **trusted digital marketplace for property transactions**.

Key Features & Functionality

1. Advanced Property Listings

Property owners or agents will be able to submit detailed listings, including:

- Property images
- Location information
- Property descriptions
- Title documentation
- Pricing details

All listings will initially be placed in a **pending verification state** until internal review is completed. Only properties that successfully pass verification checks will become available to buyers. This process prevents buyers from transacting on **unverified or fraudulent listings**.

2. Robust Search & Filtering

Buyers will be able to search for properties using multiple parameters, such as:

- Location
- Price range
- Property type
- Property size
- Bedrooms and amenities

Advanced filters and saved searches will allow buyers to easily track properties that meet their requirements.

3. Role-Based Dashboards

The platform will implement **role-based access control**, ensuring that each stakeholder interacts with the system according to their responsibilities.

Buyers

Buyers will be able to:

- Browse verified property listings
- Track verification and due diligence progress
- Initiate payments
- Communicate with sellers
- Schedule property inspections

Sellers

Sellers will be able to:

- Submit new property listings
- Upload property documentation
- Track listing verification status
- Communicate with potential buyers

Property Professionals

Professionals such as surveyors, inspectors, and legal representatives may assist with:

- Property inspections
- Verification processes
- Legal documentation validation

Internal Staff

Internal SafeBuyRealties staff will manage:

- Property verification workflows
- Document validation
- Listing approvals or rejections
- Operational oversight

Administrators

Administrators will have full system control, including:

- User management
- System configuration
- Platform monitoring
- Reporting and analytics

4. Secure Payment & Escrow System

The platform will incorporate an escrow-based payment structure designed to protect both buyers and sellers.

The payment process will follow these steps:

- Buyers initiate payment for due diligence processes.
- Property verification procedures are completed.
- Funds for property purchase are held in escrow.
- Funds are released to the seller only when all transaction conditions are satisfied.

Payment processing will be integrated through trusted Nigerian payment gateways such as **Paystack or Flutterwave**. These gateways process payments securely while maintaining regulatory compliance.

Technical Architecture & Stack

The platform will be built using a modern and scalable web technology stack.

Frontend: The user interface will be developed using **React.js**, enabling a responsive and dynamic user experience across desktop and mobile devices.

Backend: The backend system will manage business logic, authentication, and platform workflows using technologies such as **Node.js with Express or Python with Django**. These technologies provide high reliability for data-driven platforms.

Database: A relational database, such as **PostgreSQL or MySQL**, will store:

- Property records
- User accounts
- Transaction history
- Verification records

Cloud Infrastructure: The platform will be deployed on a secure cloud infrastructure to ensure:

- System scalability
- Data security
- Reliable uptime

Platform Hosting & Infrastructure

The SafeBuyRealties platform will be deployed on a secure cloud hosting environment to ensure reliability, scalability, and system performance.

The hosting environment will include:

- Application server infrastructure
- Managed database services
- Secure document storage for property records
- SSL encryption for secure data transmission
- Automated backups
- Basic monitoring tools

Estimated Hosting Costs

At the launch stage, estimated hosting costs typically range between:

₦120,000 per year

Actual costs will depend on:

- Platform usage levels
- Number of users
- Storage requirements
- Transaction volumes

Third-Party Integrations

Some services required by the platform are provided by third-party vendors.

Payment Gateways

Payment processing will be handled through **Paystack or Flutterwave**

These services generally **do not charge setup or registration fees**, but instead deduct a **small percentage per transaction processed**.

Additional services that may be integrated include:

- Email notification services (There are free options for a start)
- SMS messaging providers
- Map services for property locations (Google Maps is free)
- Escrow service integrations

Costs associated with these services are typically **usage-based**.

Project Scope, Timeline & Milestones

The SafeBuyRealties platform will be developed using a structured development process with a targeted delivery timeline of **6-8 weeks**.

Week 1: Planning & Design

- Finalize project requirements
 - Review and refine frontend prototype
 - Define system architecture
 - Approve user interface designs
-

Week 2: Core Platform Development

- Implement user authentication
 - Create user role structure
 - Build property listing submission functionality
-

Week 3: Verification Workflows

- Implement document upload system
 - Create verification status tracking
 - Build internal review dashboard
-

Week 4: Payment Integration

- Integrate payment gateway
 - Implement escrow workflow logic
 - Connect payment flow with verification process
-

Week 5: Marketplace Features

- Implement property search functionality
 - Build a messaging and notification system
 - Complete dashboards for buyers and sellers
-

Week 6 - 8: Testing & Deployment

- Conduct system testing
 - Fix bugs and optimize performance
 - Deploy platform to production environment
 - Conduct a user training session
-

Development Cost Breakdown & Payment Schedule

Total Development Cost:

₦2,800,000

Payment will follow a milestone-based structure.

Milestone	Payment	Description
Project Kickoff	₦1,400,000	50% deposit upon project agreement
Milestone 1	₦700,000	Due upon completion of core development features, and the system is deployed for testing.
Final Delivery	₦700,000	Due upon completion, final testing, and deployment

This structure ensures that payments are aligned with development progress.

Deliverables

Upon project completion, Corne Labs will deliver:

- Fully functional web application
- Source code repository
- Platform documentation
- User guide for administrators
- Deployment configuration
- Training session for SafeBuyRealties team

Additionally, Corne Labs will provide **30 days of post-launch bug-fix support** to fix any post-launch defects at no extra cost.

Post-Launch Maintenance & Technical Retainership

To ensure the SafeBuyRealties platform remains secure, stable, and continuously improved after launch, Corne Labs offers ongoing technical maintenance services under a retainership model.

This ensures that the platform has a dedicated technical partner responsible for system stability and future improvements.

Basic Maintenance Plan

₦100,000 per month

Includes:

- Platform monitoring
- Security updates
- Bug fixes

- Backup monitoring
- Up to 4 hours of technical support monthly

Team structure:

- Lead Developer
 - Shared infrastructure support
-

Standard Maintenance Plan

₦300,000 per month

Includes:

- Priority technical support
- Performance monitoring
- Up to 16 development hours monthly
- Minor feature improvements

Team structure:

- Lead Developer
 - Part-time support developer
 - QA support resource
-

Premium Maintenance Plan

₦600,000 per month

Includes:

- Continuous system monitoring
- Priority issue resolution
- Up to 30 development hours monthly
- Feature upgrades and optimizations

Team structure:

- Lead Developer
- Backend/Frontend developer
- QA engineer
- Support coordinator

Corne Labs remains the **primary technical partner responsible for system architecture and development.**

Future Enhancements & Platform Expansion

The initial development phase focuses on delivering a **Minimum Viable Product (MVP)**.

Future development phases may introduce additional features, including:

Mobile Field Application

A mobile application may be developed for field professionals, such as:

- Inspectors
- Surveyors
- Property agents

This mobile app would allow users to:

- Capture property photos on site
 - Upload inspection reports
 - Update verification status
 - Submit property location data in real time
-

AI-Powered Platform Features

Future versions of the platform may include AI capabilities such as:

- Automated document verification
 - Fraud detection indicators
 - Smart property recommendations
 - Market pricing insights
-

Marketplace Expansion Features

Additional capabilities may include:

- Map-based property discovery
- Property comparison tools
- Premium listing subscriptions
- Analytics dashboards for property sellers

These features will be introduced in later development phases based on platform adoption and business growth.

Team & Process

The project will be led by **Corne Labs**, with the founder serving as **Project Lead and Lead Developer**.

The development structure will include:

- Lead Developer / Project Manager
- Supporting developers (as needed)
- QA support during testing phase

Corne Labs follows an agile development process that includes:

- Weekly progress reviews
- Continuous feedback loops
- Transparent project communication

This ensures the project remains aligned with the client's objectives throughout development.

Next Steps

1. Review and approve the proposal.
2. Sign a service agreement.
3. Make the 50% project deposit.
4. Schedule project kickoff meeting.

Upon completion of these steps, development will begin immediately.
